The Ulta Beauty Problem

Our work entails designing and delivering a business intelligence application that serves a major retail enterprise. The system showcases unique differences between Ulta store locations all across the country. Some unique differences included in this application consist of quartile differences, visual displays of each store composed of multiple factors, and export frequencies. Each segment will be explained for the audience's convenience to understand the amazing intelligence this project offers.

First, installed the plotly visualization library. This is my initial step in setting up our system. Our stores will be categorized like a library.

```
!pip install plotly-geo
```

```
Collecting plotly-geo
  Downloading plotly_geo-1.0.0-py3-none-any.whl (23.7 MB)
     ━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━━ 23.7/23.7 MB 45.8 MB/s eta 0:00:00
Installing collected packages: plotly-geo
Successfully installed plotly-geo-1.0.0
```

Our system depends on the use of the pandas and numpy libraries. This acts as a foundation towards the system in order to properly allow information to be showcased. Without it, this project wouldn't be possible.

```
import pandas as pd
import numpy as np
```

```
url ='https://raw.githubusercontent.com/stefanbund/py3100/main/ProductList_118.csv'
url_m = 'https://raw.githubusercontent.com/stefanbund/py3100/main/matrix.csv'
```

```
df_m = pd.read_csv(url_m) #make a pandas dataframe
```

These are all the cities' endcap sales. Each store contains a variety of endcaps and all display the difference in sales. We can recognize that certain city sales do better than others. Factors like population and location may be things to consider when forming opinions on each endcap's high/low performance.

```
df_m
```

Lists all cities in the matrix data frame. Maintaining a high number of locations can highlight the difference in store's performance which can depict those that need more focus in order to significantly drive more sales.

```
df_m['City'] #explore a Series inside the dataframe
```

```
